# *Hothoint* BAND-MASTER

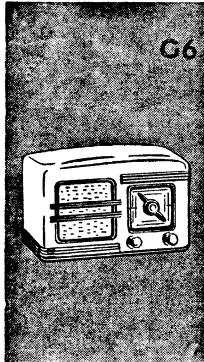

## Radio Receivers

### SERVICE DATA & TECHNICAL INFORMATION

**4 Valves  
One Band**

AUSTRALIAN  
**GENERAL ELECTRIC**  
PROPRIETARY LIMITED

**Battery  
Operated**

### ELECTRICAL SPECIFICATIONS.

FREQUENCY RANGE ..... 540-1600 Kc/s (555-187.5 M)

INTERMEDIATE FREQUENCY 455 Kc/s

#### BATTERY COMPLEMENT:

Model G64-MV, G64-MVZ—1-4 volt accumulator

Model D44-MM—Battery operation

	Cable with tips	Cable with plugs	
(1) 1-4 volt accumulator 2-45 volt "B" batteries	19183	19803	
(2) 1-1.5 volt dry cell "A" battery 2-45 volt "B" batteries	19182	19801	

NOTE: If a 1.5 volt dry cell "A" battery is used, it is necessary, if dial illumination is required, to remove the dial lamp cables from the terminals on top of the chassis and to connect the cable to the outer terminals of a 4.5 volt battery—see diagram "Battery Connections."

Vibrator Power Unit Operation: 1 4 volt accumulator.

#### Vibrator Power Unit:

Models G64-MV, G64-MVZ ..... 20420

Model D44-MM ..... 19190

#### Battery Consumption.

Models G64-MV,

G64-MVZ ..... 4 volt accumulator 0.8 amp.

Model D44-MM ..... 4 volt "A" battery 0.15 amp.

1.5 volt "A" battery 0.25 amp.

"B" battery 14 mA

Vibrator operation 0.9 amp.

#### Dial Lamps.

Models G64-MV,

G64-MVZ ..... 6.0 volt, 0.15 amp. M.E.S.

Model D44-MM ..... 6.3 volt, 0.25 amp. M.E.S.

#### Fuse.

Battery operation (D44-MM only) .....  $\frac{1}{2}$  amp.

Vibrator operation ..... 3 amp.

#### Valve Complement.

- (1) 1R5 Converter
- (2) 1T4 I.F. Amplifier
- (3) 1S5 Detector, A.F. Amplifier, A.V.C.
- (4) 3V4 Output

#### Vibrator Cartridge.

Models G64-MV, G64MVZ: A.W.A. Oak type V 5278

Model D44-MM: A.W.A. Oak type V 6804

#### Loudspeaker (Permanent Magnet).

Model G64-MV

5 inch—code number AC32

Transformer—XA8

V.C. Impedance—3 ohms at 400 C.P.S.

Model G64-MVZ

5 inch—code number AC39

Transformer—XA8

V.C. Impedance—3 ohms at 400 C.P.S.

Model D44-MM

7 inch—code number AY40

Transformer—XA8

V.C. Impedance—3 ohms at 400 C.P.S.

Undistorted Power Output, 200 milliwatts.

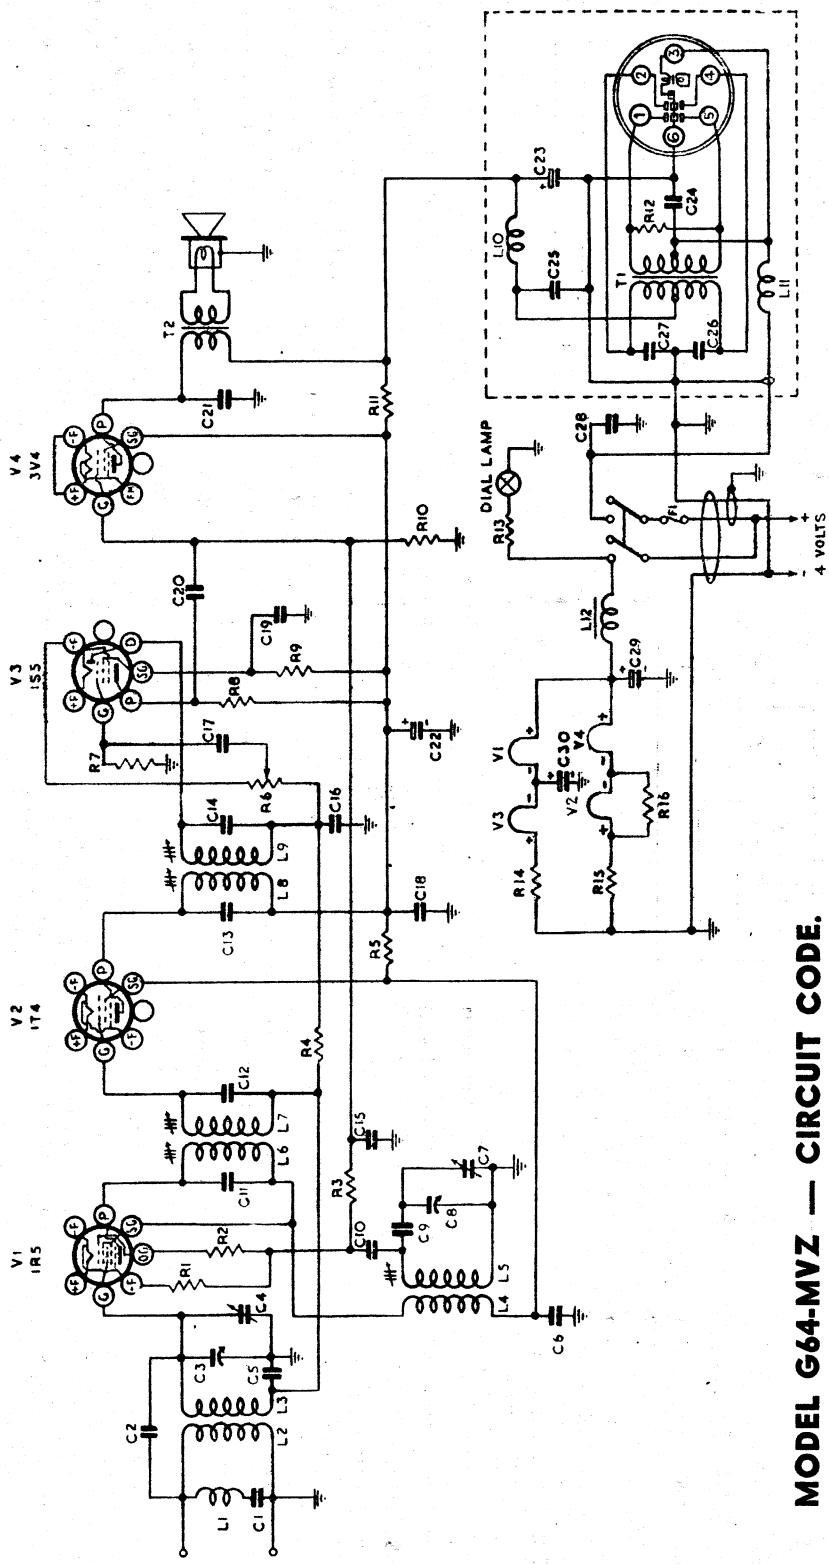

#### Controls.

Models G64-MV, G64-MVZ—Combined On/Off switch and Volume—Left hand control. Tuning—Right-hand control.

Model D44-MM. Combined On/Off switch and Tone-Left-hand control.

Volume—Centre control.

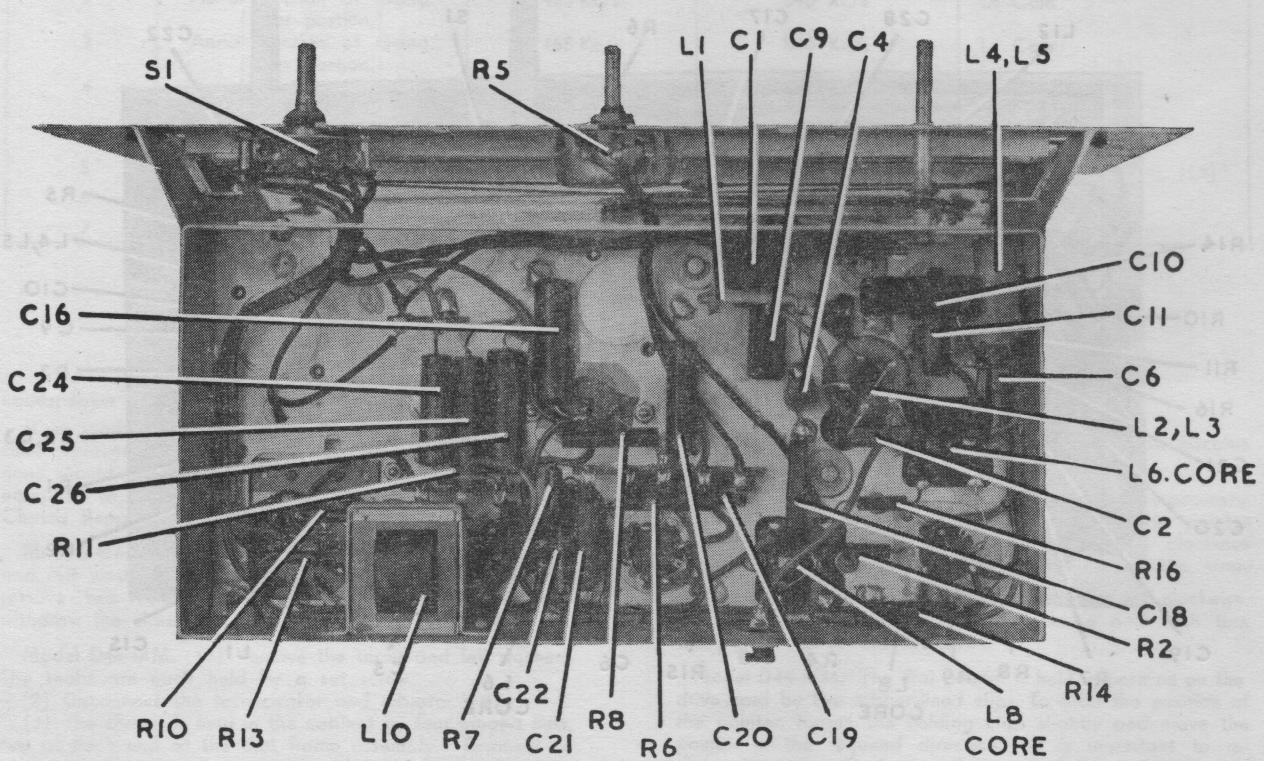

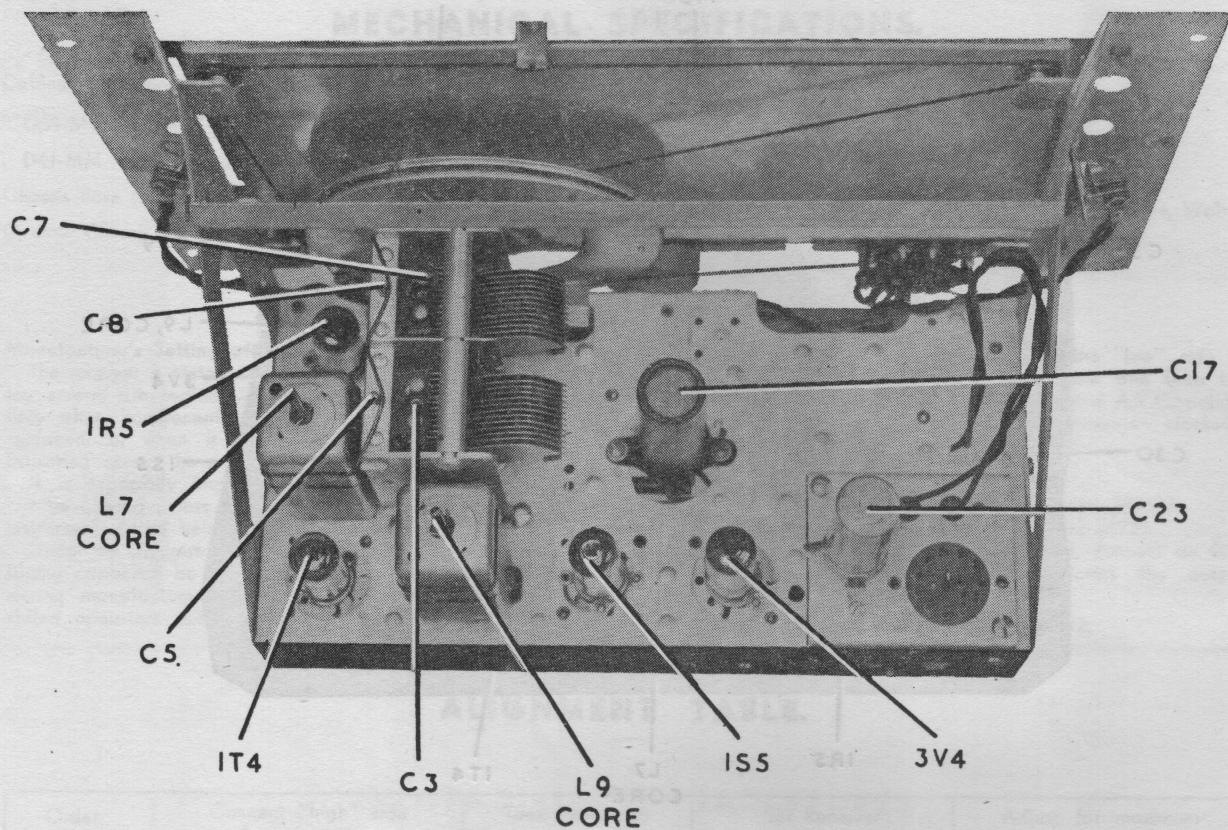

Tuning—Right-hand control.

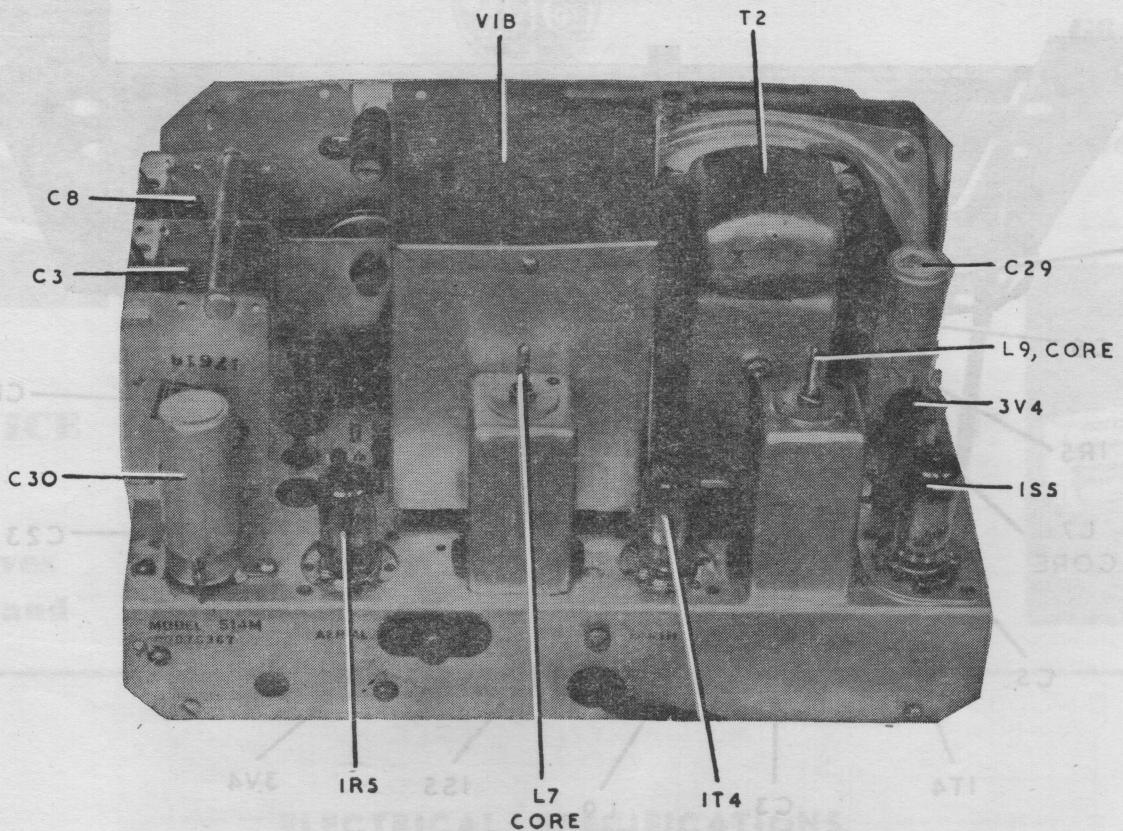

## MODEL G64-MVZ — CIRCUIT CODE.

				D44-MM Walnut veneer

## ALIGNMENT PROCEDURE.

### Manufacturer's Setting of Adjustments.

The receiver is tested by the manufacturer and all adjusting screws are sealed. Re-alignment should be necessary only when components in tuned circuits are repaired or replaced, or when it is found that the seals over the adjusting screws have been broken.

It is especially important that the adjustments should not be altered unless in association with the correct testing instruments listed below.

Under no circumstances should the plates of the ganged tuning capacitor be bent, as the unit is accurately aligned during manufacture and cannot be re-adjusted unless by skilled operators using specialised equipment.

For all alignment operations connect the "low" side of the signal generator to the receiver chassis, and keep the generator output as low as possible to avoid A.V.C. action. Also, keep the volume control in the maximum clockwise position.

### Testing Instruments.

- (1) A.W.A. Junior Signal Generator, type 2R3911.
- (2) A.W.A. Modulated Oscillator, type J6726.  
If the modulated oscillator is used, connect an 0.25 megohm non-inductive resistor across the output terminals.
- (3) A.W.A. Output Meter, type 2M8832.

## ALIGNMENT TABLE.

Order	Connect "high" side of generator to:	Tune Generator to:	Set Receiver Dial to:	Adjust for maximum peak output
1	Aerial Section of Gang. (Rear portion.)	455 Kc/s	540 Kc/s	L9 Core
2	Aerial Section of Gang. (Rear portion.)	455 Kc/s	540 Kc/s	L8 Core
3	Aerial Section of Gang. (Rear portion.)	455 Kc/s	540 Kc/s	L7 Core
4	Aerial Section of Gang. (Rear portion.)	455 Kc/s	540 Kc/s	L6 Core
Repeat the above adjustments until the maximum output is obtained.				
5	Aerial Terminal	600 Kc/s	600 Kc/s	L.F. Osc. Core Adj. (L5)*
6	Aerial Terminal	1500 Kc/s	1500 Kc/s	H.F. Osc. Adj.†
7	Aerial Terminal	1500 Kc/s	1500 Kc/s	H.F. Aer. Adj.‡

\*Rock the tuning control back and forth through the signal.

†C4 in models G64-MV, G64-MVZ; C5 in model D44-MM.

‡C7 in models G64-MV, G64-MVZ; C8 in model D44-MM.

### Loudspeaker Service.

It is inadvisable to attempt loudspeaker repairs other than replacement of the transformer. The fitting of a new cone should be done only by Service Departments suitably equipped to do the work.

### Chassis Removal.

**Models G64-MV, G64-MVZ.** First remove the control knobs and felt washers—each knob is held by a set screw. Then remove two screws from underneath the cabinet and withdraw the chassis.

**Model D44-MM.** (1) Remove the knobs and felt washers. The knobs are each held by a set screw.

(2) Disconnect the loudspeaker and vibrator cables.

(3) The chassis is held in the cabinet by four winged nuts, two at each end of the dial frame assembly. Removal of these enables the chassis to be withdrawn from the cabinet.

### Dial Pointer Adjustment.

**Models G64-MV, G64-MVZ.** Should the pointer become displaced it can be reset as follows:-

Tune a known station by ear and note any inaccuracy of the pointer. If it is necessary to turn the pointer slightly clockwise, turn the tuning control fully clockwise and then turn the pointer sufficiently to correct the error.

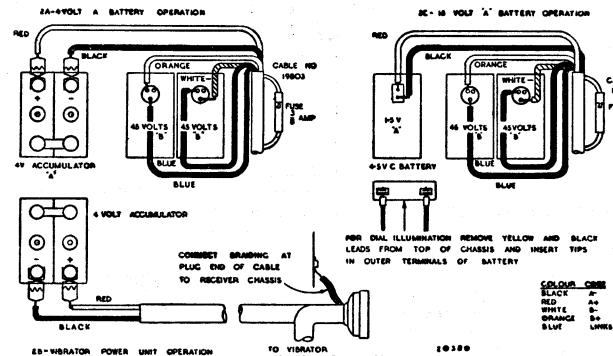

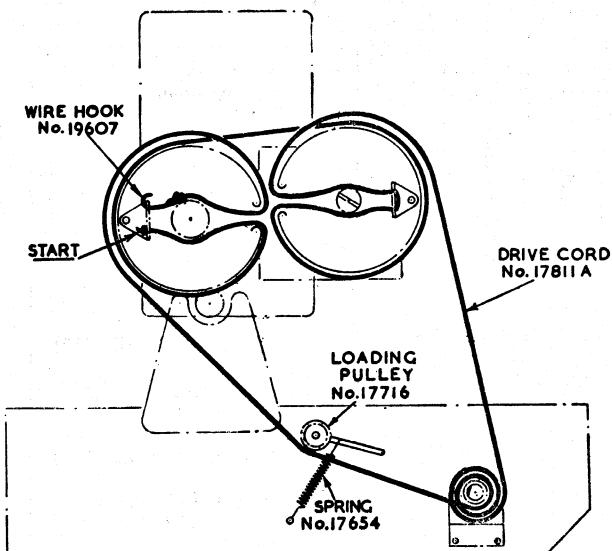

If it is necessary to turn the pointer slightly anti-clockwise, turn the tuning control fully anti-clockwise and then turn the pointer to correct the error.

**Model D44-MM.** The dial pointer is held in position on the drive cord by two rubber-lined clips. To alter the position of the pointer, loosen the holding clips slightly and move the pointer in the required direction. It is important to re-clamp the clips after any adjustment of the pointer.

### Tuning Drive Cord Replacement.

**Models G64-MV, G64-MVZ.** Disconnect the spring from the loading pulley. The accompanying diagram shows the route of the cord and the method of attachment. The cord is made from a  $27\frac{1}{4}$  inch cut length, which allows for the knot at each end. When fitting, apply tension to the cord during the operation and use a pair of round-nose pliers to bend the hook round the anchor plate to take up any slack. Place the loading pulley on the drive cord and replace the spring.

**Model D44-MM.** Follow the diagram which is affixed to the back of the dial frame assembly. This shows the route of the cord and the method of attachment.

BATTERY CONNECTIONS. MODEL D44-MM.

### SOCKET VOLTAGES. MODELS G64-MV, G64-MVZ.

Valve	Bias Volts	Screen Grid to Chassis Volts	Anode to Chassis Volts	Anode Current mA	Filament Volts
